

# Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to MDH for the week ending February 16, 2019

Prepared by the Division of Infectious Disease Surveillance  
Prevention and Health Promotion Administration  
Maryland Department of Health

*The data presented in this document are provisional and subject to change as additional reports are received.*

*\*Percentages may not total 100 due to rounding*

## SUMMARY

During the week ending February 16, 2019 influenza-like illness (ILI) intensity in Maryland was **MODERATE** and there was **WIDESPREAD** geographic activity. The proportion of outpatient visits for ILI reported by Sentinel Providers remained similar. The proportion of outpatient visits for ILI reported by Maryland Emergency Departments increased. The proportion of MRITS respondents reporting ILI decreased from last week. Clinical laboratories reported a slight decrease in the proportion of specimens testing positive for influenza. Two hundred and thirty five specimens tested positive for influenza at the MDH lab. There were 158 influenza-associated hospitalizations. There were eight respiratory outbreaks reported to MDH.

### ILI Intensity Levels

|                   |
|-------------------|
| Minimal           |
| Low               |
| <b>✓ Moderate</b> |
| High              |

### Influenza Geographic Activity

|                     |
|---------------------|
| No Activity         |
| Sporadic            |
| Local               |
| Regional            |
| <b>✓ Widespread</b> |

### ILINet Sentinel Providers

Nineteen providers reported a total of 6,160 visits this week. Of those, 225 (3.7%) were visits for ILI. This is **above** the Maryland baseline of 2.0%.

| ILI Visits To Sentinel Providers By Age Group | This Week Number (%) | Last Week Number (%) | Season Number (%) |
|---|----------------------|----------------------|-------------------|
| Age 0-4                                       | 75 (33%)             | 103 (37%)            | 877 (31%)         |
| Age 5-24                                      | 92 (41%)             | 105 (38%)            | 1,086 (38%)       |
| Age 25-49                                     | 34 (15%)             | 27 (10%)             | 472 (17%)         |
| Age 50-64                                     | 15 (7%)              | 24 (9%)              | 240 (8%)          |
| Age ≥ 65                                      | 9 (4%)               | 21 (8%)              | 153 (5%)          |
| Total   | 225 (100%)           | 280 (100%)           | 2,828 (100%)      |

### Visits to Emergency Departments for ILI

Emergency Departments in Maryland reported a total of 59,226 visits this week through the [ESSENCE surveillance system](#). Of those, 3,754 (6.3%) were visits for ILI.

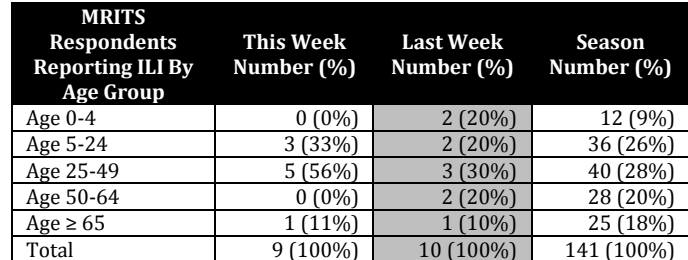

| ILI Visits To Emergency Departments By Age Group | This Week Number (%) | Last Week Number (%) | Season Number (%) |
|--|----------------------|----------------------|-------------------|
| Age 0-4  | 640 (17%)            | 578 (16%)            | 7,456 (22%)       |
| Age 5-24   | 1,110 (30%)          | 1,047 (30%)          | 10,143 (30%)      |
| Age 25-49  | 1,271 (34%)          | 1,150 (32%)          | 10,329 (30%)      |
| Age 50-64  | 511 (14%)            | 516 (15%)            | 4,214 (12%)       |
| Age ≥ 65   | 222 (6%)             | 254 (7%)             | 2,216 (6%)        |
| Total  | 3,754 (100%)         | 3,545 (100%)         | 34,358 (100%)     |

A summary of influenza surveillance indicators reported to MDH for the week ending February 16, 2019

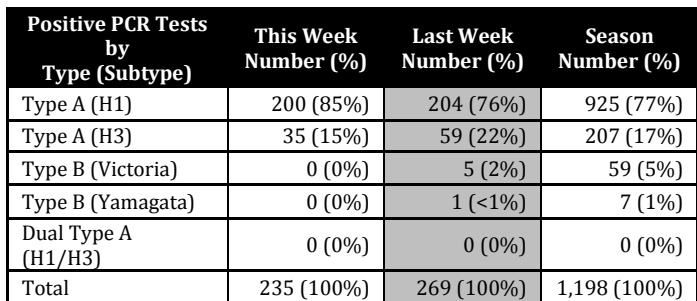

MRITS is the Maryland Resident Influenza Tracking System, a weekly survey for influenza-like illness (ILI). A total of 596 residents responded to the [MRITS survey](#) this week. Of those, 9 (1.5%) reported having ILI and missing 10 cumulative days of regular daily activities.

There were 69 clinical laboratories reporting 7,707 influenza diagnostic tests, mostly rapid influenza diagnostic tests (RIDTs). Of those, 2,100 (27.2%) were positive for influenza. Of those testing positive, 1,962 (93%) were influenza Type A and 138 (7%) were influenza Type B. The [reliability of RIDTs](#) depends largely on the conditions under which they are used. False-positive (and true-negative) results are more likely to occur when the disease prevalence in the community is low, which is generally at the beginning and end of the influenza season and during the summer.

The MDH Laboratories Administration performed a total of 296 PCR tests for influenza and 235 (79.4%) were positive for influenza. Of those testing positive, 200 (85%) were positive for Type A (H1) and 35 (15%) were positive for Type A (H3). PCR testing is more reliable than RIDT. The MDH testing identifies subtypes of influenza A and lineages of influenza B, information that is not available from the RIDT results. The table below summarizes results by type, subtype, and lineage.

# Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to MDH for the week ending February 16, 2019

## Influenza-associated Hospitalizations

A total of 158 influenza-associated hospitalizations were reported this week. (A person with an overnight hospital stay along with a positive influenza test of any kind, e.g., RIDT or PCR, is considered an “influenza-associated hospitalization” for purposes of influenza surveillance.) This surveillance is conducted as a component of the Maryland Emerging Infections Program.

| Influenza-Associated Hospitalizations by Age Group | This Week Number (%) | Last Week Number (%) | Season Number (%) |
|--|----------------------|----------------------|-------------------|
| Age 0-4  | 11 (7%)              | 15 (6%)              | 102 (9%)          |
| Age 5-17   | 12 (8%)              | 16 (7%)              | 59 (5%)           |
| Age 18-24  | 4 (3%)               | 4 (2%)               | 22 (2%)           |
| Age 25-49  | 26 (16%)             | 32 (14%)             | 187 (17%)         |
| Age 50-64  | 44 (28%)             | 68 (29%)             | 309 (28%)         |
| Age ≥ 65   | 61 (39%)             | 97 (42%)             | 407 (37%)         |
| Total  | 158 (100%)           | 232 (100%)*          | 1,086 (100%)      |

## Influenza-associated Deaths

An influenza-associated death is one with a clinically compatible illness and a positive influenza test of any kind.

**Pediatric Deaths:** The total number of pediatric (< 18 years of age) deaths reported this influenza season is 1.

Influenza-associated pediatric mortality is a reportable condition in Maryland. Pediatric deaths are tracked without regard to hospitalization.

**Adult Deaths Among Hospitalized Patients:** A cumulative season total of 20 deaths have been reported among adults admitted to Maryland hospitals.

Influenza-associated adult mortality is *not* a reportable condition in Maryland. However, surveillance for mortality in hospitalized adults is conducted as a component of the Maryland Emerging Infections Program.

| Influenza-Associated Deaths          | Cumulative Season Total |
|--------------------------------------|-------------------------|
| Pediatric Deaths (Age < 18)          | 1                       |
| Adult Deaths (in hospitalized cases) | 20                      |

## Outbreaks of Respiratory Disease

There were eight respiratory outbreaks reported to MDH this week. (Disease outbreaks of any kind are reportable in Maryland. Respiratory outbreaks may be reclassified once a causative agent is detected, e.g., from ILI to influenza.)

| Respiratory Outbreaks by Type | This Week Number (%) | Last Week Number (%) | Season Number (%) |
|-------------------------------|----------------------|----------------------|-------------------|
| Influenza                     | 6 (75%)              | 7 (88%)              | 27 (54%)          |
| Influenza-like illness        | 2 (25%)              | 1 (13%)              | 11 (22%)          |
| Pneumonia                     | 0 (0%)               | 0 (0%)               | 12 (24%)          |
| Other Respiratory             | 0 (0%)               | 0 (0%)               | 0 (0%)            |
| Total                         | 8 (100%)             | 8 (100%)*            | 50 (100%)         |

# Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to MDH for the week ending February 16, 2019

## National Influenza Surveillance (CDC)

Influenza activity continues to increase in the United States. Influenza A(H1N1)pdm09, influenza A(H3N2), and influenza B viruses continue to co-circulate.

- **Viral Surveillance:** The percentage of respiratory specimens testing positive for influenza viruses in clinical laboratories increased. While influenza A(H1N1)pdm09 viruses predominated in most areas of the country, influenza A(H3) viruses have predominated in HHS Region 4 and accounted for 47% of subtyped influenza A viruses detected nationally during week 7. During the most recent three weeks, influenza A(H3) viruses were reported more frequently than influenza A(H1N1)pdm09 viruses in HHS Regions 6 and 7 and influenza A(H1N1)pdm09 and influenza A(H3) viruses were reported in approximately equal numbers in HHS Region 2.
- **Influenza-like Illness Surveillance:** The proportion of outpatient visits for influenza-like illness (ILI) increased to 5.1%, which is above the national baseline of 2.2%. All 10 regions reported ILI at or above their region-specific baseline level.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Puerto Rico and 48 states was reported as widespread; one state reported regional activity; the District of Columbia reported local activity; the U.S. Virgin Islands and one state reported sporadic activity; and Guam did not report.
- **Influenza-associated Hospitalizations:** A cumulative rate of 27.4 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported. The highest hospitalization rate is among adults 65 years and older (75.6 hospitalizations per 100,000 population).
- **Pneumonia and Influenza Mortality:** The proportion of deaths attributed to pneumonia and influenza (P&I) was below the system-specific epidemic threshold in the National Center for Health Statistics (NCHS) Mortality Surveillance System.
- **Influenza-associated Pediatric Deaths:** Seven influenza-associated pediatric deaths were reported to CDC during week 7.
- **Outpatient Illness Surveillance:** Nationwide during week 7, 5.1% of patient visits reported through the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) were due to influenza-like illness (ILI). This percentage is above the national baseline of 2.2%. (*ILI is defined as fever (temperature of 100°F [37.8°C] or greater) and cough and/or sore throat.*)

### Where to get an influenza vaccination

Interested in getting a flu vaccine for the 2018-19 influenza season? Go to <https://phpa.health.maryland.gov/influenza/Pages/getvaccinated.aspx> and click on your county/city of residence. You will be redirected to your local health department website for local information on where to get your flu vaccine.
